Taking place on 14th - 15th September, at Olympia, London, this promises to be an exciting event for the company as they present their ground-breaking products and solutions, including the cost-saving Genius, journey data management and t-1000 intelligent DVR devices.

Visitors to stand E11 will have the opportunity to view demonstrations of Synectics Simplicity HVR, the new all-in-one Hybrid DVR appliance and have the chance to enter our competition to win a hair-raising driving experience courtesy of Synectics.

### Synectics Mobile Systems

Synectic Mobile Systems, is the specialist mobile division of Synectic Systems Group Ltd (Synectics) which has over 20 years experience designing and manufacturing specialist CCTV, command control software applications and recording systems for Governments, Defence and Security industries worldwide.

Synectics' unparalleled ability to deploy custom digital surveillance solutions that integrate with existing legacy systems and future technologies has established them as a market leader in the Middle East, UK, Europe and North America. For more information about Synectics, visit [www.synx.com](http://www.synx.com)

Graham Jones, Divisional Director of Synectics Mobile Systems, expressed his enthusiasm at the forth-coming event " We are very excited to be showcasing so many innovative products specifically tailored for a wide variety of applications within the Transport industry. With our systems currently in use and proving highly successful on the DLR, Jubilee London underground line and Heathrow's Terminal 5, we are highly enthusiastic to show those within all areas of Transport what cutting-edge solutions we can provide for their surveillance needs."

In addition to exhibiting at the show, Synectics Mobile Systems Managing Director, Andrew Prince will be presenting a workshop on 14th September entitled 'Getting a real return on transport security systems', which guarantees to offer a unique insight into how companies can maximise cost benefits through their surveillance systems.

Below are some of the key products that Synectics will be showcasing at the event:

**Genius**, the onboard vehicle journey analysis and data management system- is proven to reduce fuel consumption by up to 6% providing a direct ROI for every unit installed. Genius provides fleet, vehicle and driver performance monitoring, assisting customers with managing and reducing their operational costs. The system can be used to improve driver awareness, passenger comfort and safety, and aid in reducing the occurrence of driver/passenger injury claims.

The new **Simplicity HVR**, is a simple, out-of-the-box solution to the complex problem of installing and maintaining an effective and efficient surveillance system. An hybrid all-in one-solution ideal for mid-sized or multi-site operations such as rail and bus stations, it provides an out-of-the box solution for viewing, recording and managing video and alarms, combining high-quality recording with user friendly set-up and use. The Simplicity HVR can integrate legacy analogue cameras and IP cameras, including HD and Megapixel, into one solution. Using Synergy security management software users can easily gain access to live and recorded footage both on-site or from a centralised control location.

The **t-1000**, 'The intelligent DVR' offers so more much than video digital recording; it has the power of the latest PC built in. Specifically designed to fit to any transport vehicle anywhere, the t-1000 not only boasts high resolution video image recording, it can also perform a 'health check' of its functionality and other systems within the vehicle. Ruggedised shock resistant hard drives and solid state back-up eliminates data loss even in catastrophic incidents meaning the operator can be aware of what was and is happening at all times.

Synectics' award-winning Synergy™ security management software for centralised command and control is an innovative platform that ties together traditionally disparate systems such as access control, intruder detection and video systems, while managing the notification and workflow associated with system events. Synergy integrates with a wide range of IP, digital and analogue video systems, direct control PTZ devices, as well as monitoring, alarm and reporting applications, and video analytics.
